EDUCATION

Singapore Institute of Technology (SIT) and University of Glasgow (UoG) Bachelor of Science (Honours): Computing Science Honours with Distinction	Sep 23 – Apr 26
Ngee Ann Polytechnic (NP) Diploma in Financial Informatics	Apr 18 – Mar 20

PROJECTS/PORTFOLIO

Singapore Institute of Technology Internship

Data Pipeline Automation: Database Management & Visualisation Sep 25 – Apr 26

- Designed and implemented an end-to-end data ETL data, structuring data models and schemas to ensure consistency across large datasets
- Processed and corrected** data for **100,000+ computer records**, improving warranty and specification accuracy at scale
- Built and configured** Elasticsearch dashboards to **detect data anomalies**, enabling faster identification and resolution of inconsistencies

Singapore Institute of Technology Project

DevOps: MRT Gantry (Facial Recognition) Sep 24 – Dec 24

- Architected and developed** a cloud-based web application integrating microservices via **gRPC**, achieving **99% facial recognition accuracy** in prototype testing
- Implemented and deployed** containerised services using **Docker and Kubernetes**, improving system portability and scalability across environments
- Integrated** backend services with REST APIs to enable seamless communication between AI models and frontend systems. Designed an accessibility-focused solution with my team to improve usability of MRT gantries for users with disabilities

Singapore Institute of Technology Project in collaboration with DigitalNext

Software Development for Clients: Form Creation Web App Sep 24 – Apr 25

- Successfully developed and deployed** a full-stack web application, reducing repetitive manual form entry and improving user input efficiency
- Designed and implemented** backend services using **Node.js (Fastify)** with RESTful APIs for dynamic form generation and data handling
- Built** responsive frontend interfaces using **Vue.js**, enhancing usability and reducing user form fatigue
- Collaborated** within and across cross-functional teams to **deliver the solution within project timelines**, aligning with client requirements and improving data accuracy

Singapore Institute of Technology Project – Awarded grade A

Mobile Development: Gamified Step Tracker Jan 25 – Apr 25

- Led a team** to successfully develop a gamified mobile application using **Kotlin Jetpack Compose**, increasing user engagement in daily step tracking
- Engineered backend connectivity and data persistence to support **real-time** user progress and cooperative gameplay features

- **Designed and implemented** a guild-based system to encourage sustained user participation and social interaction via **cloud Firebase**.

WORK EXPERIENCE

Internship, Sea Ltd.

Sep 25 – Apr 26

- **Designed, optimised and implemented** database schemas and data ingestion pipelines, improving data consistency across integrated systems to process and validate data for **100,000+ records**, ensuring accuracy of warranty and specification information
- **Developed** Elasticsearch dashboards to **visualise datasets and identify anomalies**, enabling data-driven decision-making
- **Integrated** existing systems and data sources, improving interoperability and reducing manual data reconciliation efforts

Internship, HSBC

Aug 20 – Jan 21

- Automated web data extraction workflows using UiPath, scraping **thousands of records** to replace manual data collection and significantly reduce processing time by 1 week
- Successfully developed **VBA scripts** to automate weekly sales reporting, improving reporting efficiency and ensuring consistent & repeatable data outputs, **generating structured reports** and support data-driven decision-making
- **Designed data visualisations** to highlight sales trends and performance insights, identifying sales opportunities
- Conducted market and competitor research on customer companies, synthesising findings into actionable insights for sales strategy discussions

AWARDS

Singapore Institute of Technology Hackathon: JP Morgan, Morgan Stanley, SAS, Aladdin

Code Olympic – 3rd Place

Apr 25

- Led a team in a 24-hour competitive hackathon no AI usage allowed, required data structures and algorithms expertise

Ngee Ann Polytechnic Hackathon, NullSec

Hack n' Flag – 1st Place

Sep 19

- Hackathon featuring challenges surrounding data structures & algorithms and cybersecurity practices

SKILLS

Languages	Kotlin, Python (5 years) , C, Java, JavaScript, PHP
Frameworks	Jetpack Compose, Docker, Kubernetes, Django, Fastify, REST API, Pandas
Databases	SQL (4 years) , NoSQL, MongoDB, Firebase, ORM, Elasticsearch (1 year)
Tools	GitHub, Jira, Confluence, Agile Methodologies, n8n

Referee: Mr Cheah Jiawei | <https://www.linkedin.com/in/cheah-jiawei-395a5520a/>

Digital Workplace Transformation Associate, Sea Ltd.
